

E2C Cassette Maintenance

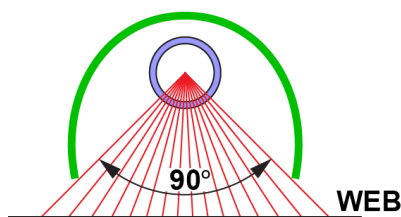

E2C cassettes are designed and manufactured for the harshest environments, with optically tuned reflectors to maximise the lamps' curing effect. To maintain the long-term operation of the UV system the cassettes should be serviced regularly (every two years). The service can increase the output of the cassette by up to 70%.

GEW offers two Service Kits that can be combined at extremely competitive prices, to keep the cassette and UV system at peak operation. GEW can also offer to have the cassette serviced by one of our fully trained technicians, if it is returned to us. This comes with a six-month warranty.

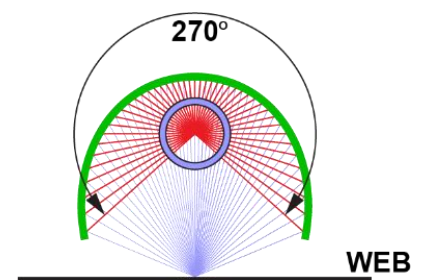

Purpose of Silver Service Kit

Lamp emits
360° energy
radiation

25% directly
incident on web,
from lamp

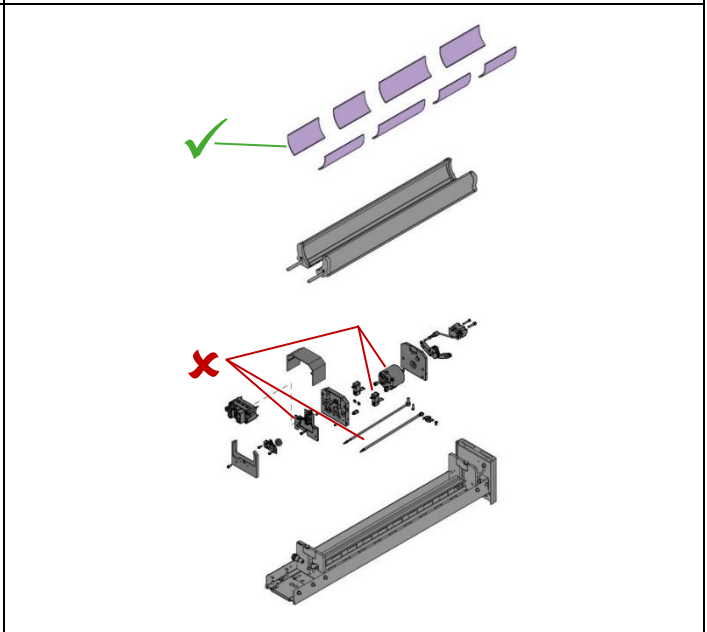

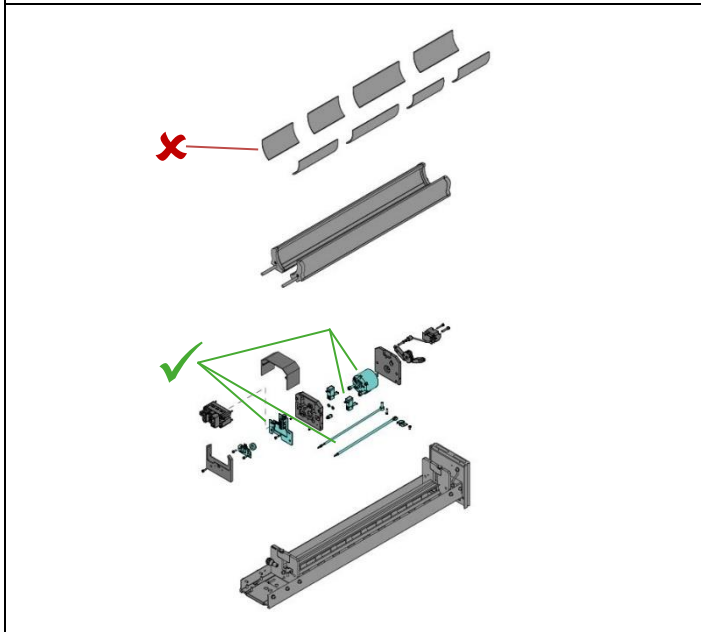

Up to 75%
redirected onto
substrate

BRONZE

SILVER

Bronze Service Kit includes all the highest wearing mechanical & electrical components.

Silver Service Kit dichroic reflector inserts to optimise the curing.
